Great — glad this all lines up with your vision! 🚀  
Cold Case Toolkit is now set up with:

- Explicit **scrape** → **template** → **repo** workflow
- **Failure-handling** for tricky/incomplete sources
- **Prompt starters** that encourage both normal and troubleshooting use cases
- A clear **quick reference guide** you can share with users

Do you want me to also add the **quick guide directly into the GPT's context** so it can respond with it whenever someone asks "how do I use you?" or should we keep it separate in your repo only?
